

How to avoid it:

\*\*Avoid black tar heroin

\*\*Go to a Doctor fast  
if you have symptoms

Don't skin pop

Use a new rigg for every hit

\*\*Cleanin the injection sites well

If you think you might have it, here's how to check

1. At first, it looks like an abscess
2. Draw a small circle the size of a dime around the injection spot
3. If the sore grows atleast 1/2 inch every half hour,
4. If you have it, get to the Doctor ASAP

(Tell them you could have wound botulism)
